**We express our  
solidarity with the workers in Greece**

We support the union within their general strike against job market reforms of the Greek government. The reform intends further wage shortenings, which can not be excepted.

Other alternatives must be searched urgently than the dramatic shortenings which go only at the expense of the employees. Europe needs to be present for its citizens with solidarity and to shield people from the impact of casino capitalism. It is obvious that we need a different policy mix to support investment, growth and employment. We ask for a new architecture for the financial markets.

**New social deal that put people and solidarity first!**
